

Dutch Product

Volt Time is a 100% Dutch company and has developed and certified the Source in the Netherlands.

We also assemble & configure the charger ourselves, locally. This way we can ensure the best quality.

Smart, Smarter, Smartest.

Load Balancing

The Source will measure current usage in the building and send the maximum available power to the charging station!

Solar Charging

Delivering excess solar power to the grid will overload the grid and will cost money. When you want, the Source will charge only on excess solar power so you will save every last dime and help the national grid!

Every car, Every situation.

Maximum Power

With 22kW power your car will be fully charged in no-time!

Automatic Billing

Want to earn money with your charger? Or do you drive a company car?

The Source is MID certified and is connected to the internet. Electricity costs are billed and invoiced to the right people and reimbursed to you automatically.
